Portable Electrochemical Workstation ZIVE PP3

The **ZIVE PP3**, a portable Potentiostat/Galvanostat/FRA, is for an electrochemical test requiring high compliance voltage such as DC corrosion measurement, EIS test under low conductivity environment etc. and is suitable for outdoor use. The system is housed in a 5 meter water-proofed industrial plastic case. A multichannel system can be configured using multiple **ZIVE PP3** units and an external PC. The internal potentiostat/galvanostat circuit is floating type to enable users to do a pipe corrosion measurement. External battery pack is not available in this model. This model use AC/DC adapter power only. The **ZIVE PP3** comes with a slim and light tablet computer as standard and you can also use your own laptop computer.

The system is designed under FPGA and DSP control with high speed capability.

DAC Control

Safety and Maintenance

1. Even though the communication failure occurs between PC and **ZIVE PP3**, the system continues its experiment on channel and saves the data into ZIVE memory up to 542,000 data point set. After the communication is restored, ZIVE will transfer saved data to PC automatically or user can transfer data when he/she wants. This function will be highly efficient for long time experiment.
2. User can define a safety condition setting by inputting his/her own safety levels for voltage, current, temperature etc. If the measurement value exceeds this setting value, the system will automatically stop to protect the system and cell.
3. If the control value of voltage or current is different from measured value, the experiment will stop automatically to protect the cell.
4. Automatic calibration function is available for user calibration.

Application

A portable electrochemical workstation, **ZIVE PP3**, is ideal for field application. You can use this system for corrosion/coating evaluation, sensor test, electrode material, membrane, etc.
